

Hosting & Running Cost Report

What it costs to put the website and appointment system online and keep it there. Three options, priced line by line against each supplier's published price, in US dollars and Thai baht.

APPLICATION	EXPECTED TRAFFIC	REPORT DATE	EXCHANGE RATE USED
culprit-web	up to 100 visitors per day	7 August 2026	\$1 = ฿33.10, computed 7 Aug 2026

PART A · THE DECISION

1. Our recommendation, and what it costs
2. The three options at a glance
3. The three decisions we need from you
4. Who we pay, and what for

Read this much and you can decide. About five minutes.

PART B · THE EVIDENCE

5. How many visitors each option supports
6. How the appointment system works
7. File storage: Cloudflare R2 against Supabase
8. What each supplier charges, with screenshots
9. Full cost breakdown per option
10. Risks and what would raise the bill
11. Sources and assumptions

Read this if you want to check the working.

PART A

The decision · everything you need to choose

1 Our recommendation, and what it costs

The website is not one product you buy. It is a set of suppliers, each doing one job, and most are free at the size this site will run at. **We recommend Option 2, a share of the existing server, at roughly \$7 to \$10 a month (฿232 to ฿331).**

RECOMMENDED COST

\$7–10 /month

฿232–331 per month

FIRST YEAR

\$84–120

฿2,780–3,972

VISITORS SUPPORTED

~3,000–5,000

/day

SUPPLIERS CHARGING US

2 of 10

The server, and the domain

Why this one

- **Nothing gets rebuilt.** The site ships exactly as designed. Option 1 saves a few dollars but costs weeks of development and weakens how the bio and publications pages appear in Google.
- **The server already exists and already runs.** We pay a share of something running anyway rather than starting a second bill.
- **It leaves room to grow.** At 100 visitors a day the site uses about a fiftieth of what the arrangement can carry. If it ever outgrows the shared machine, moving to its own server is a deployment task, not a redesign.
- **Only two suppliers ever send an invoice,** and one of them is a \$12 a year domain.

Three things go with it, all free

- **Photos and PDFs on Cloudflare R2** rather than Supabase. R2 never charges for sending files to visitors, which lifts the site's ceiling from about 650 visitors a day to several thousand. Section 7.
- **A human check in front of the booking calendar.** Calendly's free plan has no protection of its own and allows only one appointment type, so a bot could fill the professor's real

calendar. Section 6.

- **Bookings copied into the admin panel by hand**, about thirty a month, because the automatic version is a paid Calendly feature. Section 6.

What we need you to confirm

1 · Free database, no automatic backups

Low risk. The admin re-types content if it is ever lost. Only the record of past bookings could not be re-created. Full detail in section 3.

\$0

+\$25/mo later if you want backups

2 · Buy one domain, used for both the address and the email

Gives the admin login codes a sending allowance of their own. The only paid line besides the server.

~\$12

£397 per year

3 · Store photos and PDFs on Cloudflare R2

Free, ten times the space, and no charge for sending files. Costs developer time, not money.

\$0

And agree the server share with its owner

A share of the running cost of a server that is already in place, to be agreed. Option 3 in section 2 is the reference price for comparison.

\$6–9

£199–298 per month

If you disagree with any of the three, the alternative and its price are set out beside each one in section 3. Nothing here locks anything in: every paid upgrade in this report can be switched on later without changing the site.

2 The three options at a glance

OPTION 1 · VERCEL

\$1 /month

£33 /month · £397 /year

- Website hosted free by Vercel
- Requires rebuilding parts of the site to run in the visitor's browser
- Free plan is **personal, non-commercial only**
- Search-engine visibility weakens on rebuilt pages

OPTION 2 · SHARED SERVER **RECOMMENDED**

\$7–10 /month

£232–331 /month · £2,780–3,972 /year

- Runs on the existing DigitalOcean server beside the other application
- Share of the cost **to be agreed with the owner**
- No rebuilding: ships exactly as designed
- The two applications share processor and memory

OPTION 3 · OWN SERVER

\$13–19 /month

£430–629 /month · £5,164–7,547 /year

- A DigitalOcean server used by this site alone
- No rebuilding, nothing shared, nothing to interfere
- Spam protection moves onto the same machine
- Upgrading later is a slider, not a rebuild

QUESTION	1 · VERCEL	2 · SHARED SERVER	3 · OWN SERVER
Cost per month	\$1 ₧33	\$7–10 ₧232–331	\$13–19 ₧430–629
Cost per year	\$12 ₧397	\$84–120 ₧2,780–3,972	\$156–228 ₧5,164–7,547
Visitors a day supported	~1,100	~3,000–5,000	~3,000–5,000
Does the site need rebuilding?	YES	NO	NO
Good for Google search ranking?	Weaker	FULL	FULL
Any licence restriction?	PERSONAL ONLY	None	None
Can another app slow it down?	No	YES	No
Is the price fixed?	Yes	NEEDS NEGOTIATING	Yes
Who maintains the database?	Supabase	Supabase	Supabase
Who keeps the server updated?	Vercel	You / your developer	You / your developer
Effort to set up	High, the rebuild	LOW	Medium

Choose in one line

IF YOUR PRIORITY IS...	CHOOSE	PER MONTH
The lowest possible bill, and the site is strictly personal	Option 1 , accepting weeks of rebuilding	\$1 ₧33
Best value without compromising the build	Option 2 RECOMMENDED	\$7–10 ₧232–331
Nothing else able to affect the site, and a fixed predictable price	Option 3	\$13–19 ₧430–629

3 The three decisions we need from you

Each one states what we propose, what it risks, and what the alternative costs.

☐ Decision 1 · Run the database on the free plan, with no automatic backups?

The free Supabase plan holds all the site's content and booking records at no cost, but it takes **no automatic backups**. If the data were ever lost, there would be no copy to restore from.

What that means in practice. One person, the admin, enters all of the content. Recovering from a loss means that person re-typing the bio, research entries, publications, groups and events. The only thing that could not be re-created is the **record of past bookings**. The chance is low, and it drops further with a manual export now and then.

We propose: stay free. **If you would rather not:** Supabase Pro adds daily backups kept for seven days, at **\$25 a month (£828)**, and can be switched on at any time without changing the site.

☐ Decision 2 · Buy one domain, used for both the web address and the email?

A single domain at about **\$12 a year (£397)** does two jobs: it is the address visitors type, and it is the "from" address on the emails the site itself sends.

Why the email side matters. The site's own email is short but critical: the **verification code the admin needs to log in**. Resend's free plan allows 3,000 emails a month tied to **one domain per account**, so any sending account without its own domain has to share that allowance. On a shared account a busy day elsewhere can exhaust it, this site's emails stop being delivered, and **the admin cannot get into the admin panel**. A domain of our own gets its own registration, its own key and its own 3,000 emails.

We propose: buy one domain. **If you would rather not:** the site can run free on `culprit.wyco-dev.com`, a sub-address of a domain already owned, and the email would need a second free Resend account registered against it. That works and costs nothing, but it is two accounts to keep track of instead of one domain.

☐ **Decision 3 · Store the photos and PDFs on Cloudflare R2 rather than Supabase?**

Both are free. R2 gives ten times the space and, crucially, **never charges for sending files to visitors**, so the site's ceiling rises from about 650 visitors a day to several thousand. Section 7 has the comparison in full.

We propose: use R2. **Cost:** \$0 in fees, one new storage module in developer time, because the application already keeps file storage behind a swappable interface. **If you would rather not:** Supabase works today and the limit only bites above roughly 650 visitors a day, at which point the fix is \$25 a month (฿828).

4 Who we pay, and what for

Ten suppliers, eight of them free. This is the whole bill in one table.

SUPPLIER	WHAT IT DOES, IN PLAIN TERMS	COST / MONTH
The server DigitalOcean or Vercel	The computer that actually runs the website and answers visitors	\$0–18 ¥0–596
Domain name	The web address, and the "from" address on the site's own emails. One domain covers both	\$1 ¥33
Supabase	Stores the content: profile, research, publications, groups, and the record of bookings	Free
Cloudflare R2	Holds the photos and PDFs the site shows. Free, and free to send to visitors no matter how many look at them	Free
Cloudflare	Points the web address at the server, speeds the site up worldwide, provides the padlock (HTTPS), absorbs attacks	Free
Cloudflare Turnstile	The "are you human?" check on the admin login and, newly, on the booking page so bots cannot fill the calendar	Free
Resend	Sends the admin login verification code and any other notice the site itself generates. Booking emails are not sent by us, Calendly sends those	Free
Upstash	Stops one person hammering the login or the booking page hundreds of times	Free
Calendly	The booking calendar embedded in the "Make Appointment" tab. Visitors book directly inside it, and Calendly emails both sides	Free
YouTube	Holds any videos. Videos never touch our own storage, which is why they cost nothing	Free

That is the decision. Everything below is the working behind these numbers: where each figure came from, screenshots of the suppliers' own pricing pages, and what happens if the site grows.

5 How many visitors each option supports

Why we say the site has room to grow. Expected traffic is up to 100 visitors a day.

A "visit" means one person looking at about three pages. None of these numbers is a point at which the site breaks; they are the points at which a free allowance runs out and a bill starts.

ALLOWANCE	INCLUDED FREE	VISITORS PER DAY IT COVERS	APPLIES TO
Supabase downloads if photos and PDFs are stored there	5 GB / month	~ 650 ~1,650 with caching	THE BOTTLENECK unless R2 is used
Cloudflare R2 downloads if photos and PDFs are stored there	unlimited, no charge	no limit	REMOVES THE BOTTLENECK
Cloudflare R2 storage	10 GB	years of content	All options
Vercel requests	1,000,000 / month	~1,100	Option 1 only
Resend emails	100 / day	no practical limit	All options
Upstash operations	500,000 / month	~8,000	Options 1 and 2
DigitalOcean data transfer	2,000–3,000 GB / month	tens of thousands	Options 2 and 3
DigitalOcean processing power	1–2 processors	~3,000–5,000 estimate	Options 2 and 3
Supabase database size	500 MB	years of content	All options

OPTION	EXPECTED	SUPPORTED FREE	HEADROOM	WHAT RUNS OUT FIRST
1 • Vercel , files on Supabase	100 /day	~650 /day	6×	Supabase downloads
1 • Vercel , files on R2	100 /day	~1,100 /day	11×	Vercel's request allowance
2 • Shared server , files on Supabase	100 /day	~650 /day	6×	Supabase downloads
2 • Shared server , files on R2 RECOMMENDED	100 /day	~3,000–5,000 /day	30–50×	The server itself, long before any bill
3 • Own server , files on R2	100 /day	~3,000–5,000 /day	30–50×	The server itself

Read that as: at 100 visitors a day the site uses roughly a sixth of the free allowances if files sit on Supabase, and about a fiftieth if they sit on R2. Moving the files is free and it is the single most effective change in this report.

6 How the appointment system works

Confirmed against the built application, because it decides what has to be paid for and what has to be protected.

- The visitor books inside Calendly.**
 The "Make Appointment" tab shows Calendly's own booking calendar embedded in the page. There is no separate request form and no approval step. The booking is made and confirmed by Calendly directly.
- Calendly handles all the booking email.**
 The confirmation to the visitor, the notice to the professor, reminders and cancellation notices all come from Calendly.
Our site sends none of it
 , which is why the appointment flow costs nothing in email.
- A copy of the booking is recorded in our database.**

This is what the admin panel reads, and what the public "Upcoming Events" tab draws from.

4 **The admin decides what the public sees.**

Settings has a switch for the Upcoming Events tab. On, future bookings appear publicly. Off, nothing is shown. It is off by default.

5 **Cancellations flow back.**

A cancelled booking is marked cancelled rather than deleted, so the history stays intact.

WHAT THE FREE CALENDLY PLAN MEANS FOR STEP 3

The automatic copying of a booking into our database is a paid Calendly feature. It sits on **Calendly Standard at \$10 a month (£331)**, not on the free plan.

On the free plan the admin types each booking into the admin panel by hand.

Calendly emails the admin whenever someone books, so nothing is missed. It is one short form per booking, at roughly thirty bookings a month. Everything downstream, the admin table, the Upcoming Events tab, the cancellation history, works exactly the same once the entry is made.

Switching on the automatic version later is a subscription and a settings change, not a rebuild. It is priced as an optional line in section 9.

PROPOSED ADDITION · COSTS NOTHING

Put a Cloudflare Turnstile check in front of the booking calendar. Right now the Calendly widget loads for anyone who opens the page, including automated scripts. Calendly's free plan has no abuse protection of its own, and it allows only one appointment type, so a bot making fake bookings would **fill the professor's real calendar** and block genuine visitors.

Turnstile shows a quick "are you human?" check, and the booking calendar only loads once it passes. Most visitors see nothing more than a brief tick. The same service is already planned for the admin login, so this uses the setup twice.

Cost: \$0. Cloudflare Turnstile is free for all accounts. The work is a small change to one page.

What our own email is for, then. Not bookings. Resend carries the **verification code the admin needs to sign in**, and any future notice the site itself generates. That is a small volume

but a critical one: if it fails, nobody can reach the admin panel. It is the reason Decision 2 matters more than its \$12 price suggests.

7 File storage: Cloudflare R2 against Supabase

Where the profile photos, research images and publication PDFs live. Both are free; one is far less limited. The site's files have to sit somewhere and be sent to every visitor who loads a page. Two free choices exist, and they run out in very different ways.

	SUPABASE STORAGE FREE PLAN	CLOUDFLARE R2 FREE PLAN
Price	\$0	\$0
Space for files	1 GB	10 GB, ten times more
Sending files to visitors	5 GB A MONTH, THEN CHARGED	UNLIMITED, NEVER CHARGED
Visitors a day before charges	~650, or ~1,650 with caching	No storage-imposed limit
Reads included	counted against the 5 GB	10 million a month, we would use ~15,000
If we outgrow the free tier	\$25/mo (£828), then \$0.09/GB (£3) sent	\$0.015/GB (£0.50) stored a month, sending still free
Runs on the same account as	the database	the web address, CDN and Turnstile
Work to switch	already built	ONE SMALL MODULE , the app already separates storage behind a swappable interface

R2 pricing

	Standard storage	Infrequent Access storage
Storage	\$0.015 / GB-month	\$0.01 / GB-month
Class A Operations	\$4.50 / million requests	\$9.00 / million requests
Class B Operations	\$0.36 / million requests	\$0.90 / million requests
Data Retrieval (processing)	None	\$0.01 / GB
Egress (data transfer to Internet)	Free ¹	Free ¹

⚠ Billable unit rounding

Cloudflare rounds up your usage to the next billing unit.

For example:

- If you have performed one million and one operations, you will be billed for two million operations.
- If you have used 1.1 GB-month, you will be billed for 2 GB-month.
- If you have retrieved data (for infrequent access storage) for 1.1 GB, you will be billed for 2 GB.

Free tier

You can use the following amount of storage and operations each month for free.

	Free
Storage	10 GB-month / month
Class A Operations	1 million requests / month
Class B Operations	10 million requests / month

Screenshot: developers.cloudflare.com/r2/pricing, captured 7 Aug 2026. Egress, meaning sending files to visitors, is listed as **Free** on every storage class. Free tier: 10 GB storage, 1 million Class A and 10 million Class B operations a month.

WHY WE RECOMMEND IT

Put the photos and PDFs on Cloudflare R2 and keep the database on Supabase. Each supplier then does the thing it is best at, both stay free, and the site's ceiling stops depending on how many people look at the professor's photograph.

The practical difference: on Supabase the site is comfortable to about **650 visitors a day**; on R2 the limit moves to the server itself, several thousand a day. Against an expectation of 100 a day, that is the difference between six times headroom and fifty.

It also settles the database question. With the download limit gone, the free Supabase plan comfortably covers everything this site stores, so there is no case for running and maintaining a database ourselves.

8 What each supplier charges

The Culprit — Hosting & Running Cost Report · 7 August 2026

Page 14 of 33

Every price read from the supplier's own pricing page on 7 August 2026, with a screenshot as proof. Baht converted at \$1 = ฿33.10.

8.1 The server

DIGITALOCEAN, USED IN OPTIONS 2 AND 3

SIZE	SPECIFICATION	TRANSFER	PER MONTH	VERDICT FOR THIS SITE
Basic	1 processor · 1 GB memory · 25 GB disk	1,000 GB	\$6.00 ฿199	Too small
Basic	1 processor · 2 GB memory · 50 GB disk	2,000 GB	\$12.00 ฿397	OPTION 3 MINIMUM
Basic	2 processors · 2 GB memory · 60 GB disk	3,000 GB	\$18.00 ฿596	OPTION 3 COMFORTABLE , room for traffic spikes

Choose the right Droplet type

Basic Droplets

Basic Droplets have the most efficient CPU usage at a lower cost for workloads that underuse dedicated threads. They're ideal for bursty applications that can handle variable levels of CPU.

CPU Options

Regular

Premium Intel

Premium AMD

Memory	vCPU	Transfer	SSD	\$/hr	\$/mo
512 MiB	1 vCPU	500 GiB	10 GiB	\$0.00595	\$4.00
1 GiB	1 vCPU	1,000 GiB	25 GiB	\$0.00893	\$6.00
2 GiB	1 vCPU	2,000 GiB	50 GiB	\$0.01786	\$12.00
2 GiB	2 vCPUs	3,000 GiB	60 GiB	\$0.02679	\$18.00
4 GiB	2 vCPUs	4,000 GiB	80 GiB	\$0.03571	\$24.00

Screenshot: digitalocean.com/pricing/droplets, captured 7 Aug 2026. Basic Droplets, regular processors.

On the shared server (Option 2). The existing machine is already paid for by its owner, so this site adds no new bill, but it does consume part of something someone else pays for. The report uses **\$6 to \$9 a month (\$199 to \$298)**, roughly half a dedicated server, as a placeholder for whatever is agreed. Option 3 below, at \$12 to \$18 a month (\$397 to \$596), is the natural reference point: a share priced above a dedicated server of our own would not be worth taking. If the machine ever needs upsizing to carry both applications, that step is \$6 a month (\$199).

VERCEL, USED IN OPTION 1 ONLY

At 100 visitors a day the site makes about **90,000 requests a month against an allowance of 1,000,000**, roughly 9%. The rebuild that Option 1 requires is a safety margin rather than a necessity. The real obstacles on the free plan are the personal-use restriction and the 30-day pause if any limit is ever reached.

8.2 Supabase, the database

PLAN	PER MONTH	INCLUDED	LIMITATIONS
Free CHOSEN	\$0	500 MB database, 1 GB file storage, 5 GB of downloads a month, 50,000 monthly users	NO BACKUPS. A project with no traffic for a week pauses until resumed.
Pro	\$25 ฿828	8 GB database, 100 GB file storage, 250 GB downloads, daily backups kept 7 days	Beyond the allowance: \$0.09 (฿3) per extra GB downloaded

The site holds well under 100 MB of data, so the database allowance is not the constraint. With the files moved to R2, the 5 GB download allowance stops mattering too. What remains is the absence of backups, which is Decision 1. The one-week pause rule will not trigger on a live public site, because visitor traffic counts as activity.

8.3 Cloudflare, the address, the shield and the file store

SERVICE	PER MONTH	WHAT IT GIVES THIS SITE
Cloudflare Free	\$0	Runs the web address, caches the site worldwide so it loads fast everywhere, issues the HTTPS padlock, absorbs attacks
R2 storage	\$0	10 GB of space for photos and PDFs, unlimited free sending to visitors, 10 million reads a month. Beyond that: \$0.015 (£0.50) per GB stored, sending still free
Turnstile	\$0	The human check on the admin login and, newly, in front of the booking calendar
Cloudflare Pro	\$20 annual £662	Firewall rules and image optimisation. Not needed here.

Verify Visitors Without CAPTCHA

Cloudflare Turnstile confirms web visitors are real and blocks unwanted bots without slowing down web experiences for real users. It's a simple snippet of free code that eliminates CAPTCHAs. With Turnstile, you can deliver better experiences and strengthen privacy for all users.

[Start building for free](#)
[View docs](#)

CAPTCHA-Free Verification

Cloudflare Turnstile confirms web visitors are real and blocks unwanted bots without slowing down web experiences for real users. This is achieved with a simple snippet of free code that eliminates the need for frustrating CAPTCHAs.

Enhanced User Privacy

Unlike other CAPTCHA options, Turnstile never harvests data for ad retargeting. This preserves the privacy of your users without sacrificing the effectiveness of bot blocking.

Improved User Experience

Users no longer have to waste time solving visual puzzles. Turnstile works transparently to confirm they are real people, providing a smoother experience.

Streamline Visitor Verification

Screenshot: Cloudflare Turnstile, 7 Aug 2026. Free for all accounts, used on the login and the booking page.

One account, four jobs. Address, caching, file storage and bot protection all sit in the same free Cloudflare account, which is one less supplier relationship to manage and one less bill that could appear later.

8.4 Resend, the site's own email

PLAN	PER MONTH	INCLUDED
Free CHOSEN, ON OUR OWN DOMAIN	\$0	3,000 emails a month, 100 a day, one domain per account , 30 days of history
Pro	\$20 ₱662	50,000 emails a month, or 100,000 for \$35 (₱1,159), multiple domains

Screenshot: resend.com/pricing, 7 Aug 2026. Free 3,000 emails a month, Pro \$20/mo (฿662).

Resend never carries booking email. Calendly does all of that. What Resend sends is the **admin login verification code** and any future site-generated notice, which is a handful of messages a month against an allowance of 3,000. Volume will never be the problem here. The problem worth guarding against is a shared sending allowance running out on the day the admin needs to log in, which is exactly what Decision 2 fixes.

8.5 Upstash, the spam brake

PLAN	PER MONTH	INCLUDED
Free CHOSEN FOR OPTIONS 1 AND 2	\$0	500,000 operations a month, 256 MB, 10 GB transfer
Pay as you go	\$0.20 /100K ops ฿6.62	No monthly cap
Fixed 250 MB	\$10 ฿331	Flat price, unlimited operations

Screenshot: upstash.com/pricing/redis, 7 Aug 2026. Free 500,000 operations a month.

Expected use is well under 10,000 operations a month, about **2% of the free allowance**. In Option 3 this moves onto our own server and Upstash is dropped, which saves nothing because it was already free. The reasons are independence and slightly faster responses.

8.6 Calendly, the booking calendar

PLAN	PER MONTH	WHAT YOU GET	FIT
Free CHOSEN	\$0	One appointment type, one linked calendar, the embedded booking page, and all booking email to both sides	BOOKINGS COPIED INTO THE ADMIN PANEL BY HAND
Standard	\$10 /person, yearly ฿331	Unlimited appointment types, multiple calendars, automatic copying of each booking into our system	Removes the manual step. Optional, priced in section 9
Teams	\$16 ฿530	Team routing and admin controls	Not needed, single admin

Meet Calendly Notetaker. Every meeting ends with the follow-up already done.

Teams features, plus:

Scheduling

- ✓ Route with Salesforce lookup
- ✓ Connect Microsoft Dynamics
- ✓ Dedicated account support

Security

- ✓ Enable SSO & SAML
- ✓ Domain control
- ✓ Audit log compliance
- ✓ Data deletion API
- ✓ Security and legal reviews

Screenshot: calendly.com/pricing, 7 Aug 2026. The free plan lists 1 event type; automatic sync appears first on Standard.

Because the free plan allows only one appointment type, the professor's calendar has a single stream of bookable slots. That is what makes the Turnstile check in section 6 worth doing: with no protection, a handful of automated bookings could occupy the whole of it.

8.7 YouTube, the videos

SERVICE	PER MONTH	NOTES
YouTube upload and playback	\$0	Unlimited free uploads and unlimited viewing. The site stores only a link and shows the video in a privacy-friendly player. No video file is ever stored or served by us, which is the single largest cost avoided in the whole design.

8.8 The domain name

CHOICE	COST	NOTES
One new domain CHOSEN	~\$12 / year ~\$397	Serves as both the website address and the sender address for the site's own email. One registration, one Resend key, one thing to renew.
culprit.wyco- dev.com	\$0	A sub-address of a domain already owned. Free, and a perfectly good website address. Email would need a second free Resend account registered against it.

9 Full cost breakdown per option

All three assume files on Cloudflare R2 and the Turnstile check on the booking page, both free.

Option 1 · Vercel, with parts of the site rebuilt for the browser

ITEM	PLAN	PER MONTH	PER YEAR
Website hosting	Vercel Hobby	\$0.00 ₦0	\$0 ₦0
Domain	One domain, address and email	\$1.00 ₦33	\$12 ₦397
Database	Supabase Free	\$0.00 ₦0	\$0 ₦0
Photos and PDFs	Cloudflare R2 Free	\$0.00 ₦0	\$0 ₦0
CDN, HTTPS, attack protection	Cloudflare Free	\$0.00 ₦0	\$0 ₦0
Human check, login and booking page	Cloudflare Turnstile	\$0.00 ₦0	\$0 ₦0
Spam brake	Upstash Free	\$0.00 ₦0	\$0 ₦0
Admin login codes and site notices	Resend Free	\$0.00 ₦0	\$0 ₦0
Booking calendar and its email	Calendly Free, manual copy into admin	\$0.00 ₦0	\$0 ₦0
Video hosting	YouTube	\$0.00 ₦0	\$0 ₦0
Total to run		\$1.00 ₦33	\$12 ₦397
Optional, add any time			
Daily database backups	Supabase Pro	\$25.00 ₦828	\$300 ₦9,930
Automatic booking sync	Calendly Standard	\$10.00 ₦331	\$120 ₦3,972
Commercial-use licence	Vercel Pro, if the site is judged commercial	\$20.00 ₦662	\$240 ₦7,944

The cost that is not on this invoice: rebuilding the public pages so they render in the visitor's browser instead of on the server. Development work measured in weeks, and it weakens how well search engines read the bio and publications pages, which are the pages that most need to be found.

Option 2 · A share of the existing DigitalOcean server

RECOMMENDED

ITEM	PLAN	PER MONTH		PER YEAR	
Website hosting	Agreed share of the existing server ESTIMATE	\$6.00–9.00	฿199–298	\$72–108	฿2,383–3,575
Domain	One domain, address and email	\$1.00	฿33	\$12	฿397
Database	Supabase Free	\$0.00	฿0	\$0	฿0
Photos and PDFs	Cloudflare R2 Free	\$0.00	฿0	\$0	฿0
CDN, HTTPS, attack protection	Cloudflare Free	\$0.00	฿0	\$0	฿0
Human check, login and booking page	Cloudflare Turnstile	\$0.00	฿0	\$0	฿0
Spam brake	Upstash Free	\$0.00	฿0	\$0	฿0
Admin login codes and site notices	Resend Free	\$0.00	฿0	\$0	฿0
Booking calendar and its email	Calendly Free, manual copy into admin	\$0.00	฿0	\$0	฿0
Video hosting	YouTube	\$0.00	฿0	\$0	฿0
Total to run		\$7.00–10.00	฿232–331	\$84–120	฿2,780–3,972
Optional, add any time					
Daily database backups	Supabase Pro	\$25.00	฿828	\$300	฿9,930
Automatic booking sync	Calendly Standard	\$10.00	฿331	\$120	฿3,972

What you accept for the lower price: this site and the existing application share one machine's processor, memory and disk. If either misbehaves, both are affected, and updating either carries a little risk for the other. Managed in practice by giving each application its own memory ceiling. A normal arrangement for two low-traffic sites.

Option 3 · A DigitalOcean server for this site alone

ITEM	PLAN	PER MONTH	PER YEAR
Website hosting	DigitalOcean Basic, 1 processor / 2 GB	\$12.00 £397	\$144 £4,766
or website hosting	DigitalOcean Basic, 2 processors / 2 GB	\$18.00 £596	\$216 £7,150
Domain	One domain, address and email	\$1.00 £33	\$12 £397
Database	Supabase Free	\$0.00 £0	\$0 £0
Photos and PDFs	Cloudflare R2 Free	\$0.00 £0	\$0 £0
Spam brake	On the same server, Upstash dropped	\$0.00 £0	\$0 £0
CDN, HTTPS, attack protection	Cloudflare Free	\$0.00 £0	\$0 £0
Human check, login and booking page	Cloudflare Turnstile	\$0.00 £0	\$0 £0
Admin login codes and site notices	Resend Free	\$0.00 £0	\$0 £0
Booking calendar and its email	Calendly Free, manual copy into admin	\$0.00 £0	\$0 £0
Video hosting	YouTube	\$0.00 £0	\$0 £0
Total to run		\$13.00–19.00 £430–629	\$156–228 £5,164–7,547
Optional, add any time			
Daily database backups	Supabase Pro	\$25.00 £828	\$300 £9,930
Automatic booking sync	Calendly Standard	\$10.00 £331	\$120 £3,972

ITEM	PLAN	PER MONTH	PER YEAR
Weekly server snapshots	DigitalOcean backup add-on, 20% of the server price	\$2.40–3.60 \$79–119	\$29–43 \$960–1,423

10 Risks and what would raise the bill

WHAT COULD HAPPEN	EFFECT	LIKELIHOOD	COST TO FIX
Bots book fake appointments in Calendly	The professor's only bookable calendar fills with rubbish	MEDIUM	\$0 · Turnstile
Site email runs on a shared sending account	The admin login verification code never arrives and nobody can reach the admin panel	MEDIUM	\$12/yr ฿397
Server-share negotiation lands high	Option 2 loses its advantage over a dedicated server	MEDIUM	Switch to Option 3 \$13–19 · ฿430–629
Admin forgets to copy a Calendly booking	That booking is missing from the admin table and Upcoming Events	MEDIUM	\$10/mo ฿331
Database lost with no backup	Content re-entered by the admin; past booking history unrecoverable	LOW	\$25/mo ฿828
Files left on Supabase and traffic grows past ~650 a day	Download allowance exhausted	LOW	\$0 · move to R2
Vercel judges the site commercial (Option 1)	Forced upgrade	MEDIUM	\$20/mo ฿662
Visitors exceed roughly 1,100 a day (Option 1)	Site paused for up to 30 days	LOW	\$20/mo ฿662
The other application on the shared server spikes (Option 2)	Both sites slow down together	MEDIUM	\$6/mo ฿199 upsize
Exchange rate moves	Baht figures shift; dollar figures do not	CERTAIN	Re-convert at the time

11 Sources and assumptions

Every price was read from the supplier's own public pricing page on **7 August 2026**, and the screenshots were captured from those live pages on the same day. Prices change without notice, so re-check before committing.

TRAFFIC ASSUMED THROUGHOUT

MEASURE	PER DAY	PER MONTH	WHY THIS NUMBER
Visitors	100	3,000	The expected maximum
Pages viewed	300	9,000	About three pages per visit
Requests reaching the server	~3,000	~90,000	About ten per page, counting images, styles and scripts
Bookings made	~1	~30	Roughly one per working day. All their email is Calendly's
Emails sent by us	< 1	~20	Admin login verification codes only
Files sent to visitors	~25 MB	~750 MB	Photos and PDFs, less once cached
Database size	—	< 100 MB	Text records only; no files or video in the database

HOW THE VISITOR CAPACITY FIGURES WERE WORKED OUT

- One visit is assumed to be three pages, about thirty requests, and roughly 250 KB of files downloaded, falling to about 100 KB once Cloudflare caches repeat images.
- Supabase 5 GB ÷ 250 KB ≈ 20,000 visits a month ≈ 650 a day. With caching, ≈ 1,650 a day.
- Cloudflare R2 has no download charge at all, so no visitor limit follows from it. The 10 GB storage allowance is about space, not traffic.
- Vercel 1,000,000 requests ÷ 30 per visit ≈ 33,000 visits a month ≈ 1,100 a day.
- Server capacity figures are engineering estimates for this application, not supplier guarantees.

OTHER ASSUMPTIONS

- The existing DigitalOcean server has spare capacity for a second small application, and a share of its cost can be agreed. Both worth confirming before launch.
- Moving file storage to R2 and adding the Turnstile check to the booking page are development tasks, costed at \$0 in supplier fees but not in time.
- Development and ongoing maintenance time are excluded throughout. These are supplier costs only.
- Baht figures are converted at a single rate on the report date and are rounded. The dollar figures are what the suppliers actually bill.

The Culprit — Hosting & Running Cost Report. Prepared 7 August 2026. All figures verified against live supplier pricing on that date. Currency converted at \$1 = ฿33.10.
